## 2. 30-Day Execution Timetable & Milestones

### WEEKS 1 - 2: Diagnostic Forensics & Core Architecture

- Take 1 Full-Length Diagnostic Test under strict time pressure.
- Categorize all errors into the 4-Bucket Taxonomy (Concept, Speed, Tactic, Distractor).
- Draft the 8 core STAR-L story modules for your MBA Interview Story Vault.
- Refine your 90-second 'Tell Me About Yourself' executive elevator pitch.

### WEEKS 3 - 4: Precision Remediation & High-Stakes Mocks

- Conduct blind re-solve sessions for all questions missed in the last 3 practice sets.
- Implement the 30-second pacing checkpoint to avoid catastrophic end-of-section time crunches.
- Record 5 AI-powered mock interviews and analyze speech rate (130-155 WPM) & filler words.
- Conduct 2 panel mocks with senior IIT Roorkee mentors and ISB/IIM alumni.

### Essential Preparation Checklist:

- [ ] Complete 6 Official GMAC Practice Exams at your target exam time.
- [ ] Maintain a 100% updated Error Log with root-cause annotations.
- [ ] Master the GMAT Focus 3-Question Review & Edit triage protocol.
- [ ] Connect with 3 current students and 2 recent alumni from each target business school.
- [ ] Prepare 5 highly customized, strategic questions for your admissions interviewers.
- [ ] Test virtual setup: 1080p camera at eye level, directional microphone, and 3-point lighting.

### 3. Error Forensics & STAR-L Story Matrix

Systematic Frameworks for Diagnostic Error Elimination and Interview Storytelling:

|                                                                                                                                                                                                                               |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Bucket 1: Conceptual Deficit</b></p> <p>The candidate lacked the underlying mathematical property or verbal logic framework. Action: Re-study foundational theory and re-solve 10 benchmark problems.</p>               |
| <p><b>Bucket 2: Procedural / Calculation Trap</b></p> <p>The candidate understood the concept but made an algebraic or reading slip. Action: Implement the 30-Second Verification Rule and double-check unit conversions.</p> |
| <p><b>Bucket 3: Pacing / Triage Panic</b></p> <p>The candidate spent &gt;2.5 minutes and guessed frantically under time pressure. Action: Enforce strict 2-minute decision gates and strategic flagging.</p>                  |
| <p><b>Bucket 4: Distractor Trap</b></p> <p>The candidate fell for an attractive partial answer or out-of-scope trap. Action: Write down the specific distractor architecture in your Error Log.</p>                           |

| STAR-L Behavioral Story Architecture (Situation -> Task -> Action -> Result -> Learning)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
