GMAT Quant Topic Diagnostic Sheet

Arithmetic, Algebra & Word Problems Audit, Concept vs Execution Rubric & 14-Day Remediation

1. Quantitative Skill Pillar Diagnostic Grid

Audit your accuracy across the 3 primary pillars of the GMAT Focus Quantitative section (21 questions, 45 minutes).

Quant Domain Pillar	High-Frequency Sub-Topics	Target Accuracy (705+)	Diagnostic Symptom of Weakness
Pillar 1: Pure Arithmetic	Number properties, divisibility, primes, remainders, absolute values, fractions	>= 85%	Struggling with even/odd rules, remainder cycles, or integer constraints
Pillar 2: Algebra & Functions	Linear systems, quadratic equations, inequalities, exponents, roots, functions	>= 80%	Getting trapped by hidden negative roots or flipping inequality signs incorrectly
Pillar 3: Word Problems & Modeling	Rates, work/time, mixtures/alligation, percentages, profit/loss, overlapping sets	>= 80%	Taking >2.5 minutes to set up equations or translating English incorrectly
Pillar 4: Statistics & Combinatorics	Mean, median, range, standard deviation properties, counting principle, probability	>= 75%	Confusing permutations with combinations or calculating manual averages

Benchmark: Missing more than 3 questions in Quant makes achieving an 84+ (85th percentile) very difficult.

Arithmetic, Algebra & Word Problems Audit, Concept vs Execution Rubric & 14-Day Remediation

2. Concept Error vs Execution Error Classification Rubric

Every wrong answer stems from either a missing rule (concept) or poor process (execution). Treat them differently.

Diagnostic Dimension	Concept Deficit (Knowledge Gap)	Execution Slip (Process Gap)	Prescribed Remediation Protocol
Error Identification	You did not know the mathematical rule, theorem, or algebraic technique	You knew the rule perfectly but made an arithmetic slip or misread the prompt	Separate tracking in your Error Log to avoid repeating study of known topics
Time Spent on Question	Spent <1 minute (confused) or >3.5 minutes (floundering)	Spent 1.5 to 2.5 minutes with confident but incorrect execution	Concept: review theory. Execution: enforce physical scratchpad discipline
Emotional Reaction on Review	"I have never seen this property before / I forgot this formula"	"How could I miss that? 3 + 4 is 7, not 8! / I solved for x instead of y"	Concept: create concept summary card. Execution: re-read question prompt before choosing
Long-Term Solution	Re-study core arithmetic/algebra chapters from ground up	Slow down final 10 seconds; write clean steps on scratchpad	Do not solve in your head; paper notes eliminate 90% of execution slips

Rule: If execution errors exceed 50% of your mistakes, your issue is pacing and test discipline, not math intelligence.

3. 14-Day Quant High-Yield Remediation Plan

A targeted two-week sprint to eliminate fatal Quant weaknesses and stabilize scores above Q82.

- Days 1–4: Number Properties Blitz. Prime factorization, divisibility rules for 2 through 11, trailing zeros, units digit patterns.
- Days 5–8: Algebra & Inequality Mastery. Solving quadratic systems, factoring shortcuts, absolute value cases, sign-chart inequality method.
- Days 9–11: Rate, Work & Mixture Translation. Unit consistency, relative speed formulas, combined worker reciprocal rules.
- Days 12–14: Timed Sets & Scratchpad Audit. Three 21-question timed sets (45 min each) under strict exam simulation conditions.
