GMAT Mock Analysis Spreadsheet/PDF

The 3-Pass Mock Debrief Framework, Section Pacing Heatmap & Post-Mock 7-Day Fix Calendar

1. The 3-Pass Forensic Mock Debrief Protocol

Spending 2 hours taking a mock and only 15 minutes checking the score guarantees zero progress. Execute this 3-pass review.

Review Pass	Timing & Conditions	Analytical Focus & Methodology	Output Deliverable
Pass 1: Untimed Blind Re-Solve	Immediately after test, without looking at answer keys	Re-solve every missed and flagged question with unlimited time	Determines if errors were caused by time pressure vs knowledge gaps
Pass 2: Pacing & Heatmap Audit	Next day (fresh eyes), with test analytics open	Review time spent per question: identify time-sinks (>3 mins) and rushes (<1 min)	Color-coded pacing heatmap (Green = on pace, Red = time trap)
Pass 3: Root-Cause Classification	Following day, with official explanations	Log every mistake into the 4-bucket taxonomy (Concept, Translation, Careless, Panic)	Specific actionable remediation tasks added to weekly study queue

Target Ratio: Spend at least 1.5 to 2 hours reviewing for every 1 hour spent taking the exam.

2. Section Pacing Heatmap & Question Cluster Analysis

Identify which question clusters caused your performance drop on the GMAT Focus adaptive algorithm.

Question Cluster / Block	Normal Time Budget	Common Behavioral Pathology	Algorithmic Score Consequence
Questions 1 – 7 (Opening Third)	14 – 15 Minutes	Over-investing time (>3 mins/Q) trying to get a perfect start	Depletes time reservoir, creating panic in the final third
Questions 8 – 14 (Middle Third)	14 – 15 Minutes	Mental fatigue sets in; careless arithmetic slips on medium questions	Drops difficulty ceiling; prevents algorithm from serving 705+ items
Questions 15 – 21 (Final Third)	14 – 15 Minutes	Running out of time; blind guessing on last 3-5 questions	Severe algorithmic penalty for consecutive wrong answers at section close
Question Edit Feature Usage	Remaining 2–3 mins	Not reviewing flagged questions or changing correct answers to wrong	Track accuracy of edited questions (should be >= 66% positive)

Best Practice: Use your 3 allowed edits to correct questions you flagged when you had a breakthrough during review.

3. The 7-Day Post-Mock Fix Calendar

Turn your mock diagnostic into immediate score gains with this structured weekly remediation cycle.

- Day 1 (Post-Mock): Complete Pass 1 (Blind Re-solve) and Pass 2 (Pacing Audit). Do not touch theory books today.
- Day 2: Complete Pass 3 (Error Log updates). Identify top 2 weakest sub-topics (e.g. Work/Rate and CR Assumptions).
- Days 3–4: Targeted Concept Drilling. Solve 25 medium and hard problems focused exclusively on those 2 identified sub-topics.
- Day 5: Timed Micro-Sprints. Execute three 7-question timed sets (15 min each) under strict exam pacing conditions.
- Day 6: Mixed Review & Flashcards. Re-review the entire error log; ensure all previous mistakes can be solved flawlessly.
- Day 7: Rest or Next Mock. If on an intensive schedule, take the next mock; otherwise take a full rest day before resuming study.
